11 **1 INTRODUCTION**
12
13

14 Artificial Intelligence has fascinated public and scientific community alike for almost a century, since Alan Turing's
15 "Imitation Game" [4]. The idea, trivialized, is that any machine capable of fooling a person into thinking it's speaking
16 to a human can be considered sentient. For seventy-three years the game has remained unbeaten, until OpenAI's
17 ChatGPT-4 win in 2023 [1]. This model is one of the last iterations of the Generative Pre-Training models pioneered by
18 OpenAI in 2018 (at the moment of writing the latest model available is GPT-5.2) [3], which closely followed the first
19 breakthrough towards a human-like agents: "Attention Is All You Need" [5] is a 2017 landmark research paper authored
20 by eight Google researchers that introduced the *transformer* architecture, considered the backbone of all modern LLMs
21 and the main contributor of the AI boom [2].
